First published in 1938, 'Anthem' is a dystopian fiction novel by British writer Ayn Rand. It takes place at some unspecified future date when mankind has entered another dark age.

Technological advancement is now carefully planned and the concept of individuality has been eliminated.

This edition comes with new questions presented in the 2016 May revised knowledge domains. The revision is more or less a reorganization of the existing knowledge domains (after all there has not been any new major inventions in the security industry). In the practical real world a CPP may be a security manager, an external consultant, or a law enforcement agent. For purpose of the exam, however, you want to position yourself as a hired consultant - one who acts as an advisor to the company management. The company is your client, and you are helping it out. You advise, you guide, and you recommend. You need to understand your client. If your client is absolutely new to security, full scale interviews and statistical analysis on crimes may be necessary. However, if your client has a working security mechanism in place, then you should conduct assessment basing primarily on inputs from management. In other words, management determines the depth and scope of the security project. Management makes the decisions. You suggest ways to improve, then carry out the decisions made by management. You don't normally make decisions for your client. It is safe to say that you assume the role of project manager for your client's security project. The security project would start by discussing the scope of work with your client. The most important meeting between you and the client would be the initial goal setting and policy review meeting. Senior management is going to get involved, and you are going to act as the facilitator. From this meeting you become aware of the level of risk your client is willing to assume and accept. Your work would then start from there. When working on a project it is important to understand the background and operation of the client. You also want to know what you are up against. Protection against vandalism is totally different from protection against terrorist attack. A CPP is more on the planning and management side of security. A security guard professional, on the other hand, is to provide client with professional protective services. It is believed that the CPP certification is more general in nature, while the PSP certification is way more specific and in-depth in physical security. We create these self-practice test questions referencing the concepts and principles currently valid in the exam. Each question comes with an answer and a short explanation which aids you in seeking further study information. For purpose of exam readiness drilling, this product includes questions that have varying numbers of choices. Some have 2 while some have 5 or 6. We want to make sure these questions are tough enough to really test your readiness and draw your focus to the weak areas. Think of these as challenges presented to you so to assess your comprehension of the subject matters. The goal is to reinforce learning, to validate successful transference of knowledge and to identify areas of weakness that require remediation. The questions are NOT designed to "simulate" actual exam questions. "realistic" or actual questions that are for cheating purpose are not available in any of our products.

Since the first edition of Security and Loss Prevention was published in 1983, much has changed in security and loss prevention considerations. In the past five years alone, security awareness and the need for added business continuity and preparedness considerations has been uniquely highlighted given events such as Katrina, 9/11, the formation of the Department of Homeland Security, and the increase in world terrorist events. This edition of Security and Loss Prevention is fully updated and encompasses the breadth and depth of considerations involved in implementing general loss prevention concepts and security programs within an organization. The book provides proven strategies to prevent and reduce incidents of loss due to legal issues, theft and other crimes, fire, accidental or intentional harm from employees, as well as the many ramifications of corporate mismanagement. The new edition contains a brand new terrorism chapter, along with coverage on background investigations, protection of sensitive information, internal threats, and considerations at select facilities (nuclear, DoD, government and federal). Author Philip Purpura once again demonstrates why students and professionals alike rely on this best-selling text as a timely, reliable resource. - Covers the latest professional security issues surrounding Homeland Security and risks presented by threats of terrorism - Recommended reading for ASIS International's prestigious CPP Certification - Cases provide real-world applications

Change Management for Risk Professionals addresses a need in the marketplace for risk professionals to learn about change management. Organizations exist within a complex and changing environment. The changes within the organizational context (e.g., societal, technological, and customer preferences) place pressure upon the organization to remain relevant and competitive. Change is not inherently wrong; our perceptions of the change make it negative or positive. A perceived negative change can become a real opportunity for improvement if desired. Systemic degradation and irrelevancy are the results of an organization that fails to acknowledge the reality of change. The book focuses on the dynamics of change management with an eye toward the risk professional. There is a real need for an uncomplicated resource that helps educate non-change management professionals involved in risk-oriented change initiatives. Examples of risk disciplines are organizational resilience, business continuity, risk management, crisis management, and security management, but any discipline or function within an organization focuses on risk. Any organizational project is an initiative requiring dynamic change management skills. The author brings his extensive experience to offer risk practitioners advice, industry examples, and best practices to the change management process. Change Management for Risk Professionals will be a welcome addition to enterprise-wide business continuity, crisis management, disaster recovery, security management, and homeland security professionals wanting to learn the secrets to becoming successful in initiating organizational change.

The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac
